ABOUT ME

Hello, I'm Okan. I have always been interested in programming since my childhood but I started it in 2019, unfortunately. I believe that I'm progressing fast in programming and I never hesitate to get help. I have 2 experienced teachers that helping me and with their help I improved myself in Web Development.

My programming experience has started with C# and .Net/Mssql to develop websites while I was also doing small mobile development with C# and Unity. After creating some projects and games, I wanted to learn Javascript to use a better way to build frontends with React. Since then, I use Javascript to build frontend applications. Thanks to similarity between React and React Native, I also think that I have enough knowledge to build apps with React Native.

As I mentioned above, I have a great interest in programming and I want to do programming as my job, also my life style. Even if I didn't study on computer engineering, I believe that my willingness to learning and programming will help me to improve myself so fast. Lastly, because I have been studying English Language Teaching, I have a good understanding of English for both daily and formal which also leads me to understand programming documents. You can always mail me about my other skills, I would like to communicate about myself and you can also call me for a skill exam about my programming knowledge.

INTERESTS AND EDUCATION

EDUCATION

Since 2017, I have been studying Teaching English As Foreign/Second language in Mersin University which helps me to use English in a very efficient way.

I never studied about programming in **school**, but I educated myself with online resources around the World.

Now, I do study on web and mobile app development which I think I'm doing best and I believe myself and I think that I can do best!

WHAT CAN I BRING TO YOUR COMPANY ?

I wanted to give more details about me and what can I bring to the company that hire me.

Firstly, I love programming and I have fun while coding which will let me work in a much efficient way. Secondly, I really like searching and learning new things and I do think that learning should never end, no matter how much you do know. So, I will always improve myself, I will always do my best to progress. Thirdly, my English skills, especially reading, are very good which helps me to understand documents about frameworks and technologies.

To give more details, I know Javascript very well, I have experience with C# and Unity as game developer and Dart as Flutter, mobile developer.

Lastly, I am a competitive person, I don't want to be unsuccessful, so I will always contribute to the company as much as I can.
