ABOUT ME

Hello, I'm Okan. I have always been interested in programming. I'm a fast learner and I believe in myself to be successful in programming.

I started my programming with C#/MsSQL and Unity but then I wanted to develop web applications. So, I learned javascript and other tools/frameworks.

As I mentioned above, I have a great interest in programming and I want to do programming as my job, also my life style. Also, because I have been studying English Language Teaching, I have a good understanding of English.

You can always mail me about my other skills, I would like to communicate about myself and you can also call me for a skill exam about my programming knowledge.

EDUCATION

Since 2017, I have been studying Teaching English As Foreign/Second language in Mersin University which helps me to use English in a very efficient way.

I never studied about programming in **school**, but I educated myself with online resources around the World.

Now, I do study on web and mobile app development which I think I'm doing best and I believe myself and I think that I can do best!
